## Dental IT Services

All the IT requirements of dental practices from the office to the surgery.

We help dentists to use this technology to achieve excellence.

Providing fast, reliable and affordable Information Technology solutions to keep your practice running smoothly and your expenditure within budget.

We will be there to provide the total solution for your practice or just help with that one-off breakdown.

Damien Drummond is the principal behind IT in Dentistry. Damien has eight years experience working with dentists and is in a key position to be able to guide your practice.

When you deal with Damien you'll be surprised at how easy he is to understand and how patient he is in explaining computer solutions to you.

We offer fast response times to quickly resolve your computer and computer network issues in order to reduce your downtime and loss of productivity.

Understanding the needs of a Modern Dental Practice

Steri 'n' Stock® software

Sterilisation tracking and stock control in one simple, easy to use computer program.

- The key to **Steri 'n' Stock**® is its simplicity, if you are looking at having a paperless practice - then **Steri 'n' Stock**® is the answer!
- **Steri** does more than just track your critical instruments: it enhances your infection control process and prevents unsterilised or non-checked instruments being used on your patients. Steri meets Australian standards - AS/NZS 4815:2006
- **Stock** allows you to manage your expenditure, so you can focus on dentistry and not your stock levels. Your stock may be larger than expected because of over ordering or needing to urgently order an item due to not knowing it's current stock level status.
